

## مكس 2 بذور ثيل مغلفة سريعة الانبات

عشب أخضر طوال العام

# GREEN FIELD<sup>®</sup>

## Lawnseed

- ✓ WASP – Water Absorbing Seed Process.
- ✓ Without turning soil.
- ✓ Water absorbing seed.
- ✓ Needs less water.
- ✓ Stands shade and high sun light.
- ✓ Performs well in cold and hot weathers.
- ✓ Tolerant to salinity.
- ✓ Dark green most of the year.
- ✓ Stands mechanical stress.
- ✓ Easy regrow which makes it suitable for football pitches and walked on gardens.

1kg / 30-40 m<sup>2</sup>

# EASY GREEN

## Mix 2

GREEN FIELD  
Lawnseed

**Soil preparation:**  
Lumpy grass areas should be mown low (below 0.5 cm). Spread the grass seeds widely and press into soil well, preferably with a small grass roller. Seedlings should not be permitted to dry out.

**Sowing:**  
Grass can be sown from spring to late autumn. Sprinkle seeds evenly (25 - 40 g/m<sup>2</sup>) by hand or a suitable sowing machine. rake lightly and roll the area flat. Seedlings should not be permitted to dry out when it has reached hand height and then only to 5 cm. Later trimming to approximately 3-4 cm.

**Lawn care:**  
Grass must be fertilized and cut regularly. It is recommended to use a grass fertilizer which contains nutrients which are specifically orientated towards meeting the needs of the lawn. The grass should be regularly trimmed. In spring it is particularly important to ensure that the grass is kept level so that mow and thick patches can be avoided.
